

METRASLATE

COMPANY + PARTNERSHIP

A connected foundation for equipment businesses.
Premium industry software built on Asset.

Pre-seed / recruiting now

BY METRASLATE

WHY METRASLATE

The item and its history belong together.

Vegetables, oil, art supplies and instruments are all things a business may need to track. Keep their identity, history and business context connected using your own vocabulary.

Asset	An industry-agnostic operating foundation for items, materials, audit trails and the business around them. Configure the vocabulary to fit the people doing the work.
Standard	Premium Asset developed around an industry. Standard by MetraSlate: Metrology Edition connects laboratory methods and evidence with the business delivering the service.
The practical value	Less disconnected work. Reusable definitions. Explainable calculations. Records that preserve context from the request through the completed service.

THE HORIZONTAL WEDGE

Broad by design. Deep by industry.

Asset connects item records, audit trails and business work. Standard adds the workflows that make an industry distinct.

MANY INDUSTRIES

Manufacturing, healthcare, energy, construction, research, service operations and more.

ASSET / one agnostic foundation

Your vocabulary at setup. Vegetables, oil, art supplies or instruments, with their records, audit trails and business context.

STANDARD BY METRASLATE: METROLOGY EDITION

The premium foundation plus the methods, evidence and service workflows of a calibration laboratory.

FUTURE INDUSTRY EDITIONS

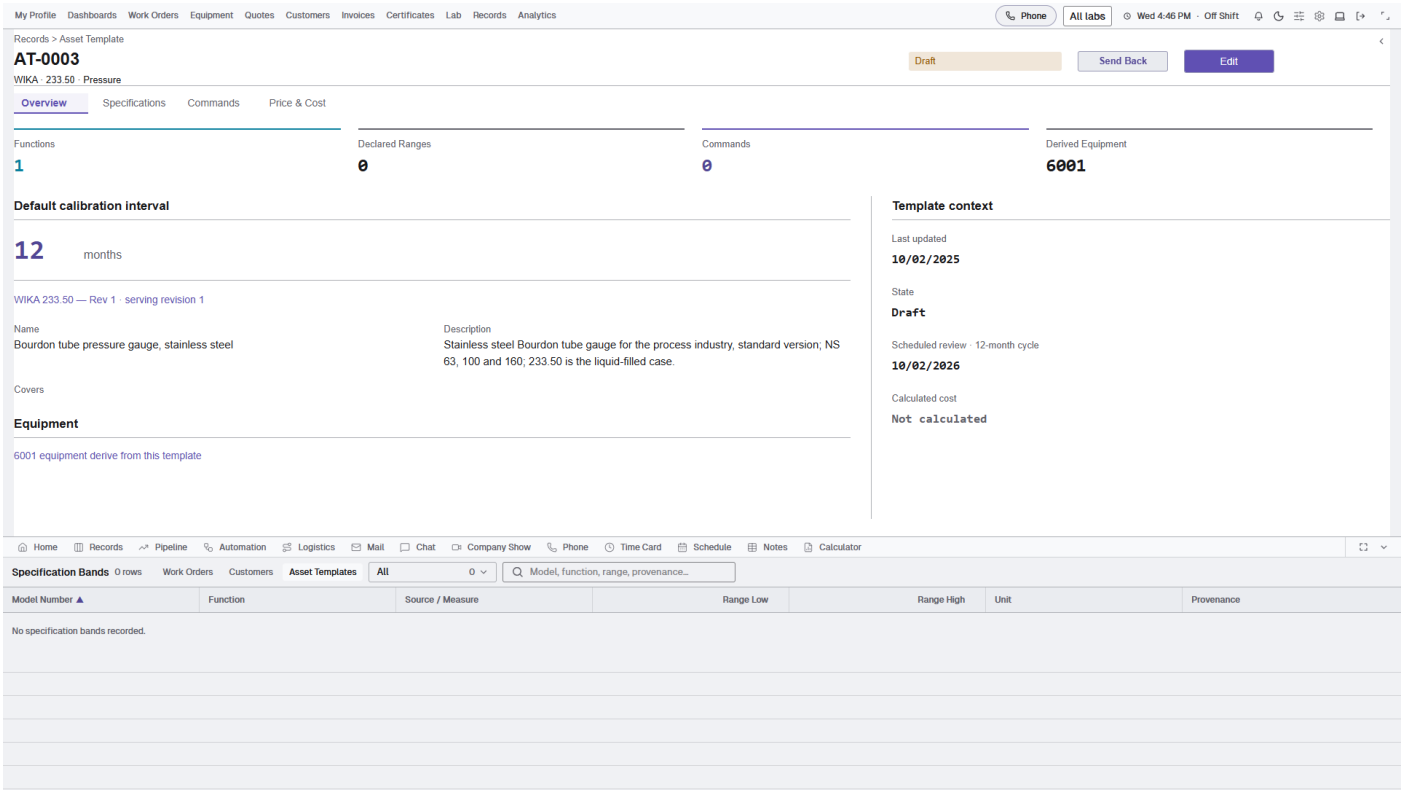

Selected design partners help define the specialist workflows their industry needs.

Change the working language without rebuilding the core. Develop a Standard edition when the work needs more than terminology.

PRODUCT IN VIEW

Define a model once. Reuse its foundation.

Common definitions should not be rebuilt for every serial number.

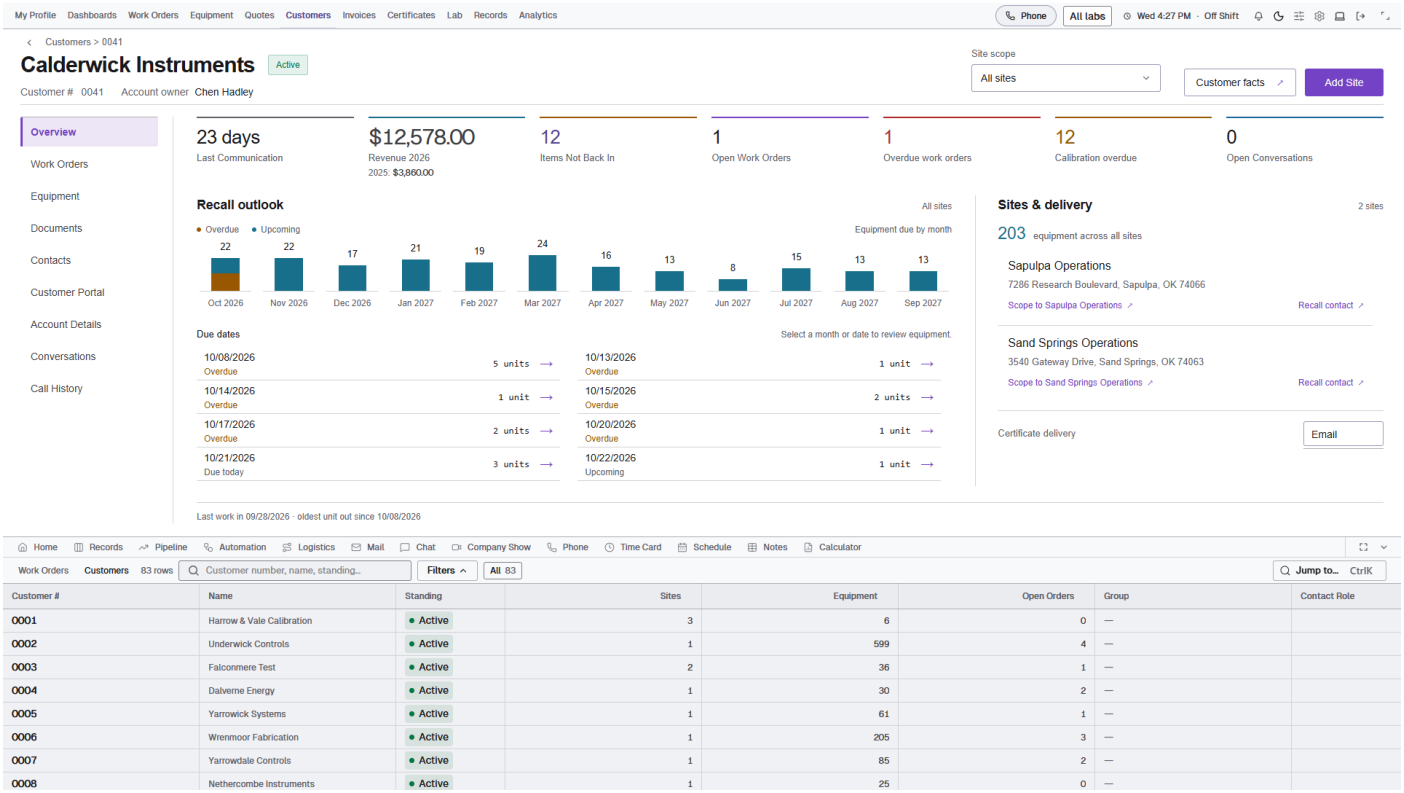

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Prepare shared model information, references and service definitions.
The result	Individual assets keep their identity while using reusable model context.
In this view	A template draft with linked references; model costing is not yet populated.

PRODUCT IN VIEW

The customer relationship has an operating record.

Bring the account, equipment and work into the same conversation.

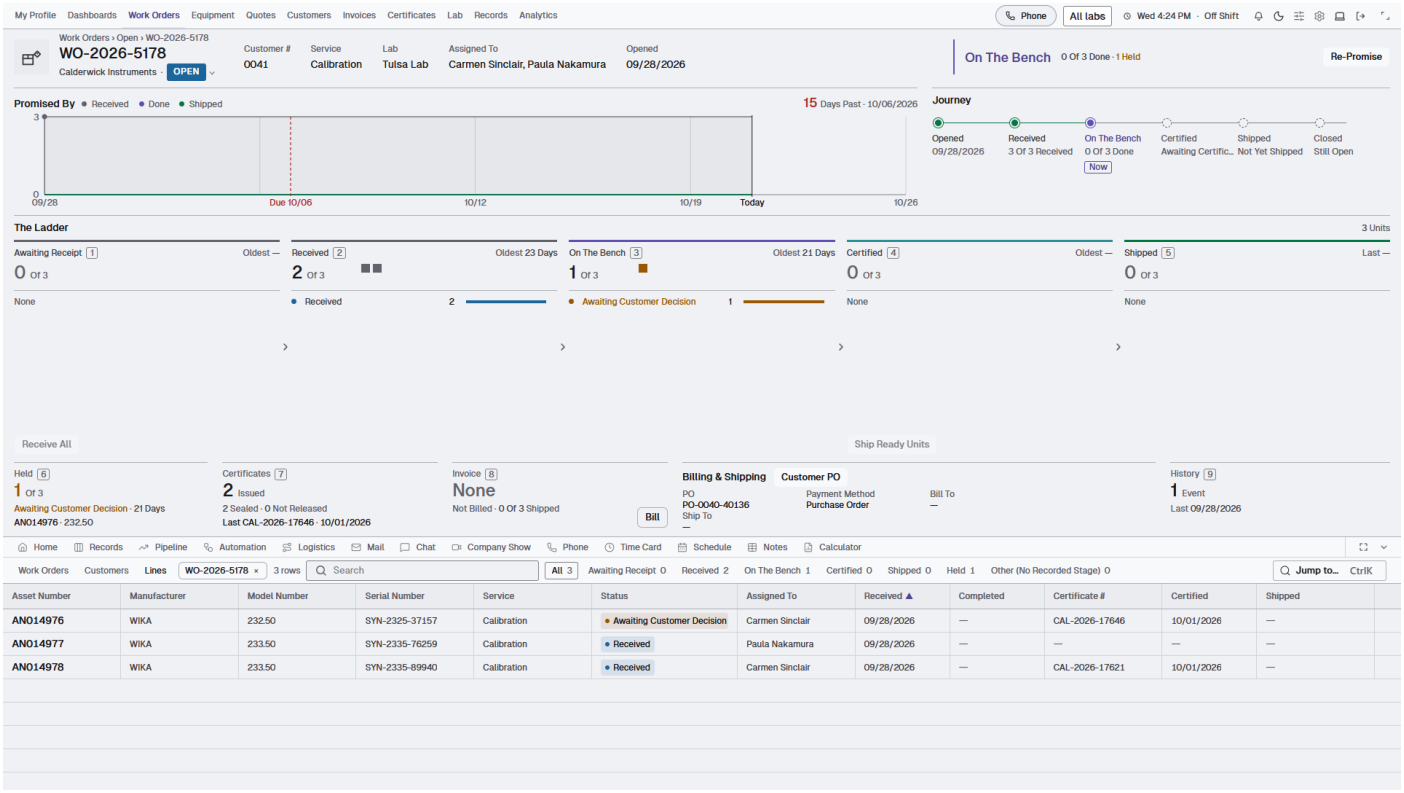

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Find the customer and inspect current service context.
The result	Work and equipment records stay connected to the account.
Why it matters	Less reconstruction when a customer calls about a job or an invoice.

PRODUCT IN VIEW

A completed measurement is not a completed job.

The commercial agreement and the technical work have to stay connected.

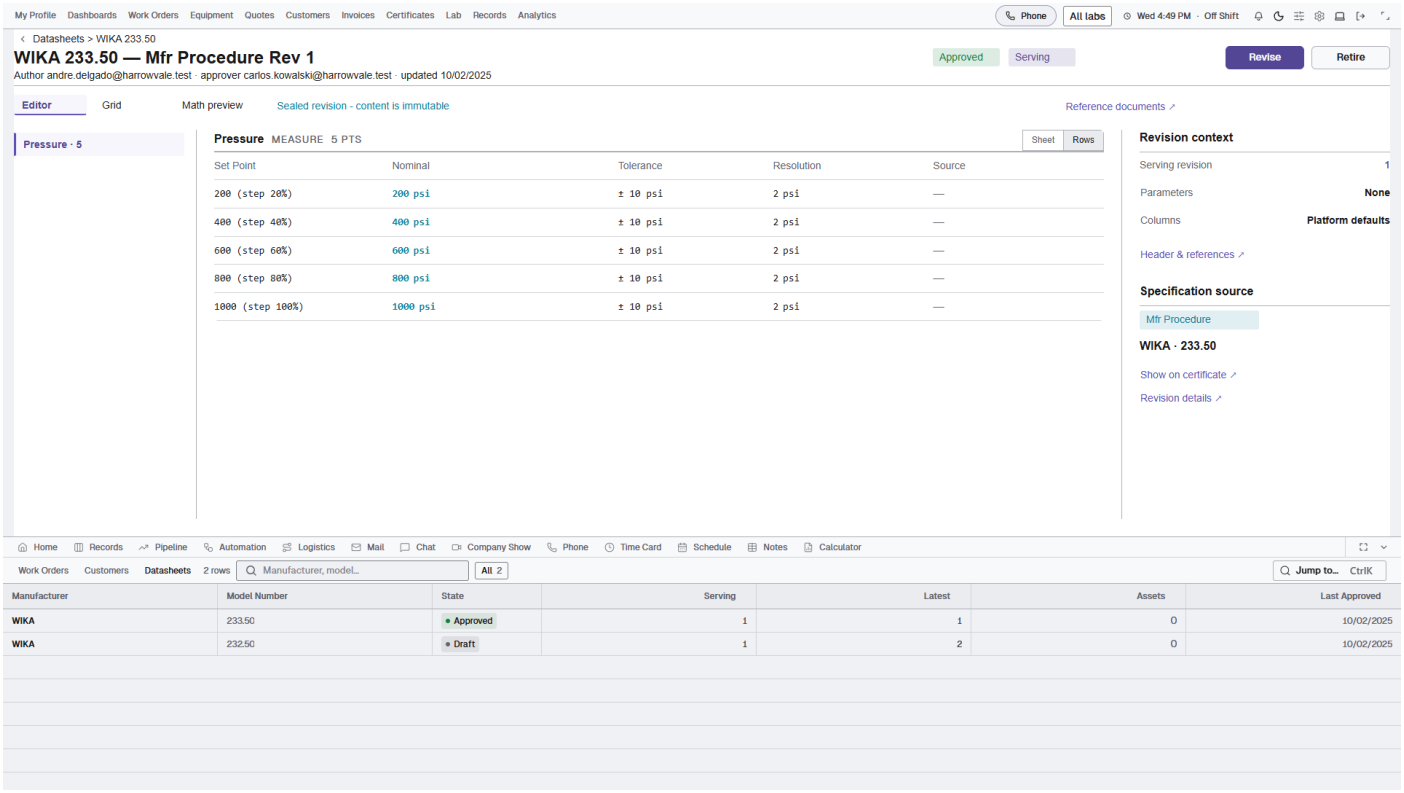

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Follow the work order and its individual instruments.
The result	The visible customer hold explains why work is waiting.
Why it matters	The next person can act on the job without piecing its story together.

PRODUCT IN VIEW

Stop rebuilding the same measurement definition.

A controlled datasheet carries the points and specifications used by the run.

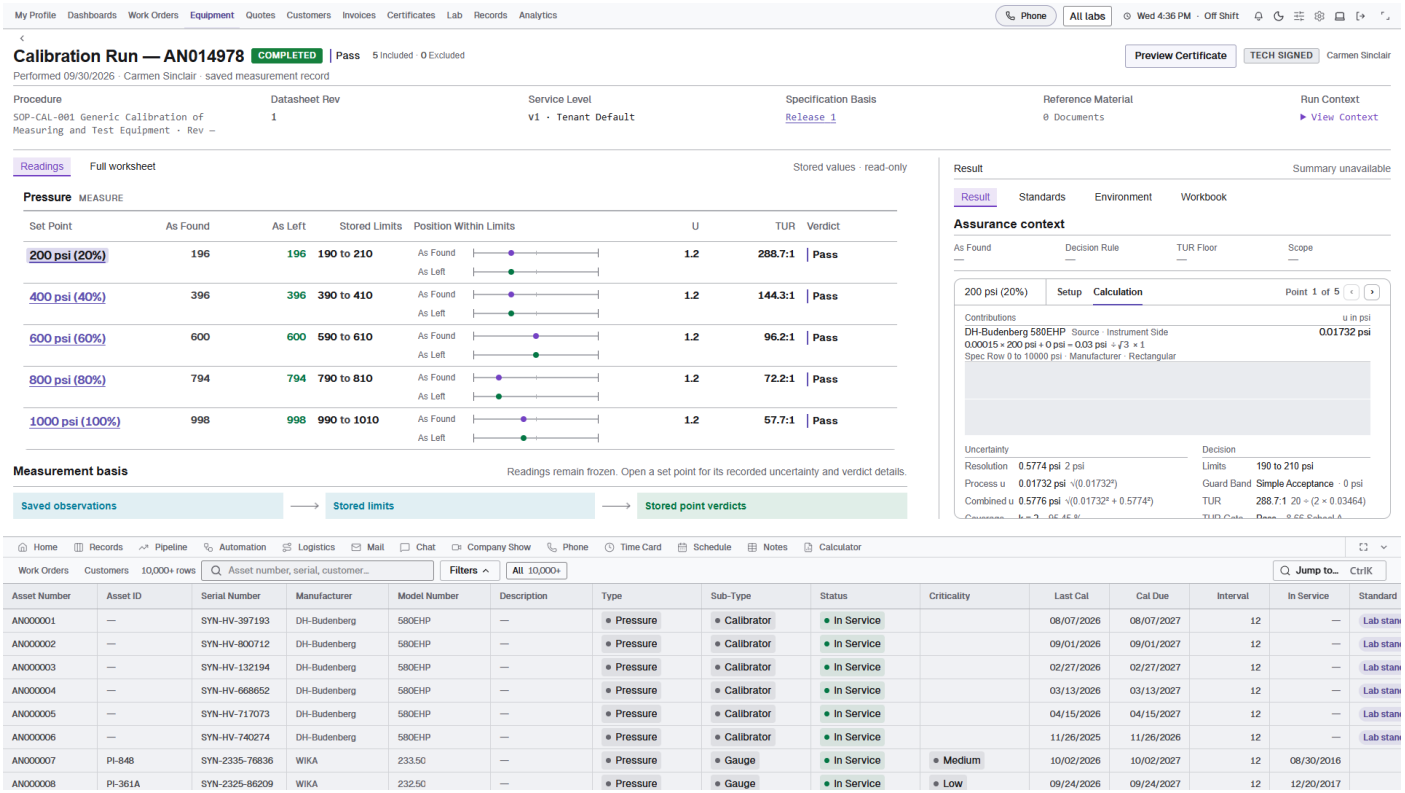

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Prepare the method for an instrument model.
The result	This approved, serving definition supplies reusable measurement points.
Why it matters	Repeat the work consistently and retain the revision behind each run.

PRODUCT IN VIEW

Keep the calculation with the measurement.

Supported uncertainty and conformity calculations are part of the technical record.

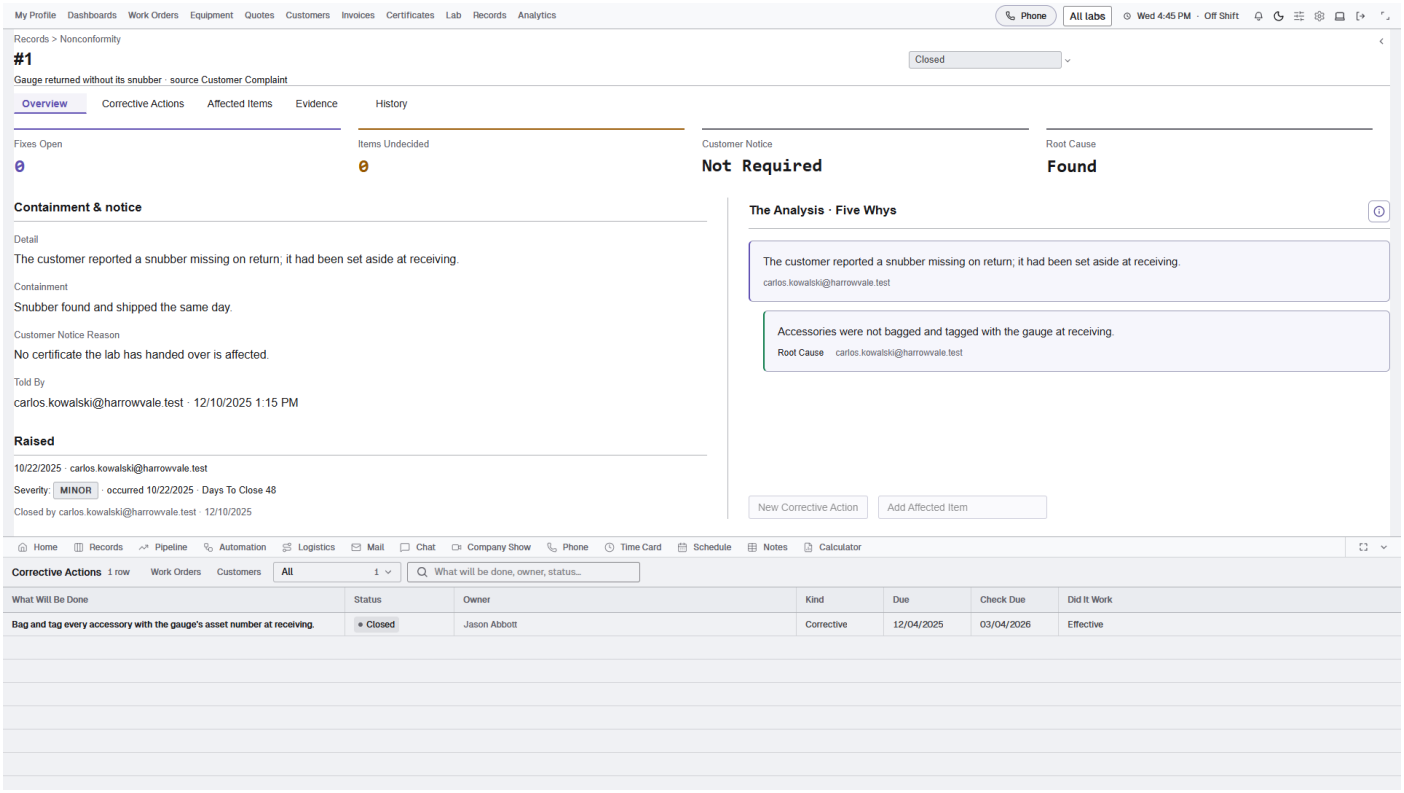

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Inspect a measured point and its calculation basis.
The result	Inputs, reported result and configured decision context are visible together.
Why it matters	Reduce repeated spreadsheet work and make review more explainable.

PRODUCT IN VIEW

Follow the problem through the corrective action.

Quality work should remain connected to the work that raised it.

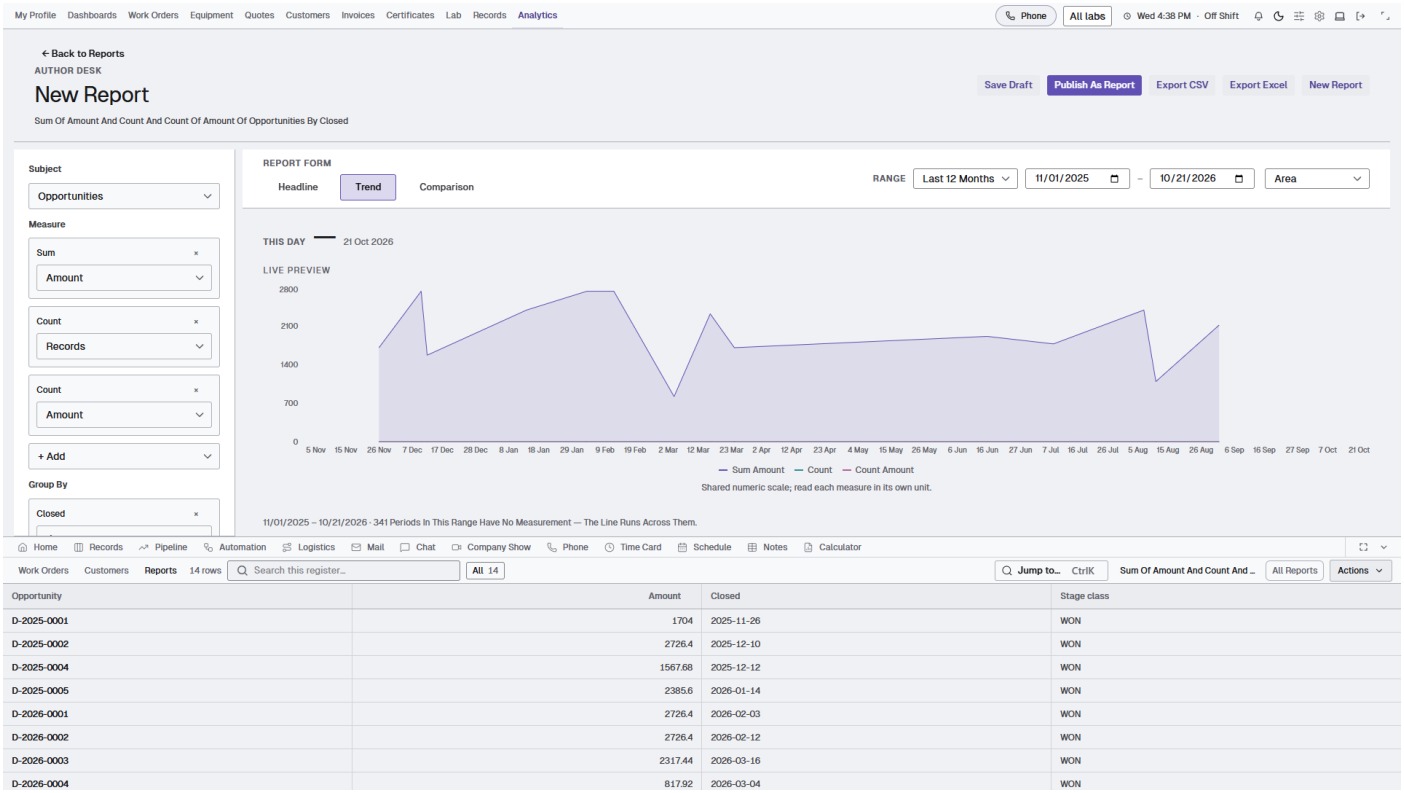

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Record containment, root cause and corrective action.
The result	Effectiveness and closure have a recorded basis.
Why it matters	A finding becomes an accountable improvement rather than another spreadsheet.

PRODUCT IN VIEW

See what is working. Investigate what is not.

Build reports from operating records and keep the contributing data within reach.

Opportunity	Amount	Closed	Stage class
D-2025-0001	1704	2025-11-26	WON
D-2025-0002	2726.4	2025-12-10	WON
D-2025-0004	1567.68	2025-12-12	WON
D-2025-0005	2385.6	2026-01-14	WON
D-2026-0001	2726.4	2026-02-03	WON
D-2026-0002	2726.4	2026-02-12	WON
D-2026-0003	2317.44	2026-03-16	WON
D-2026-0004	817.92	2026-03-04	WON

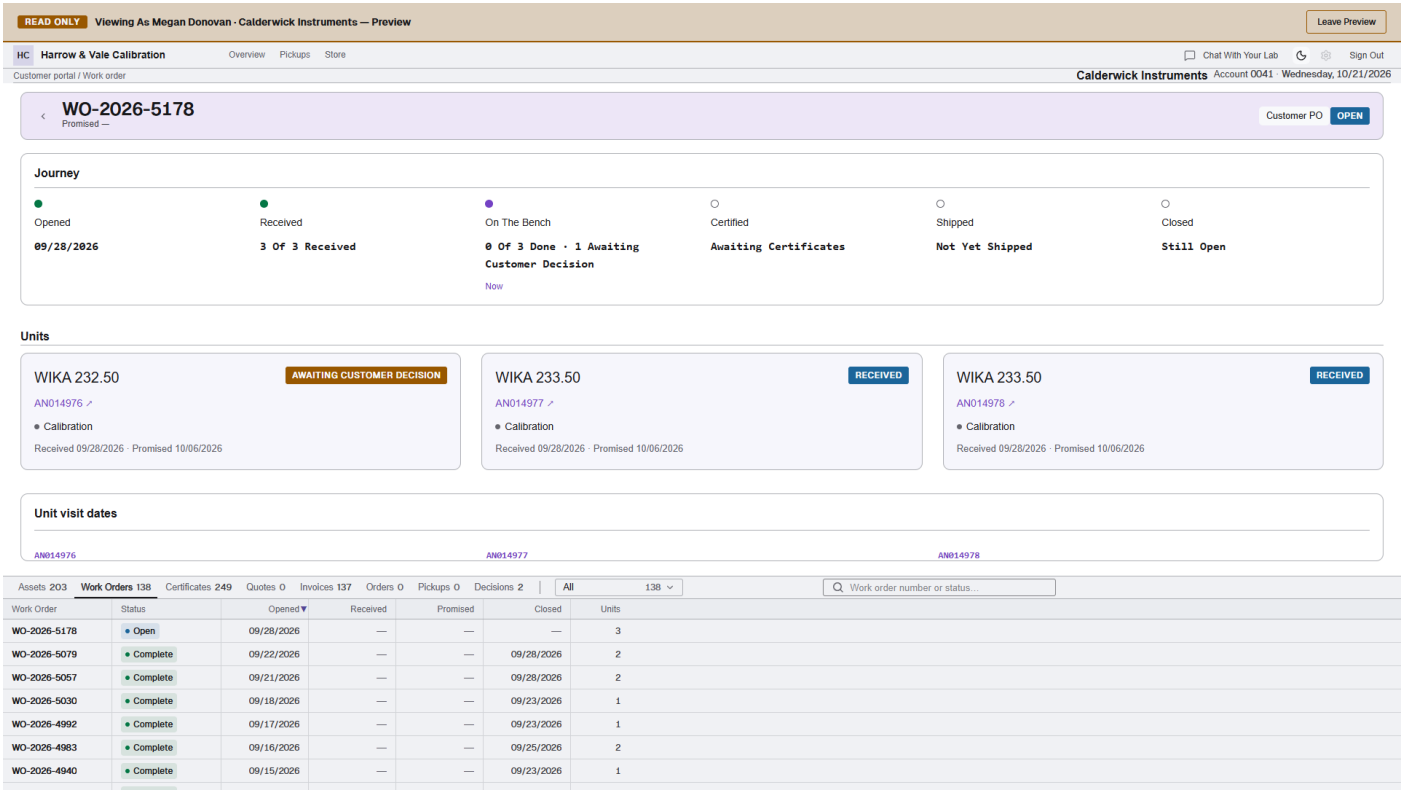

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Select a measure, grouping and reporting period.
The result	This report compares recorded opportunity amounts.
Why it matters	Use sales, people, work and quality records to ask better operating questions.

PRODUCT IN VIEW

Let customers follow the work they sent.

Customer participation extends the service relationship beyond the lab team.

Standard by MetraSlate: Metrology Edition demonstration / sample records

The task	Open the customer-facing view of a service order.
The result	Instrument progress and a requested customer decision are visible.
Why it matters	The customer can understand what is happening and what the lab needs next.

COLLABORATION AND AUDIT SAFEGUARDS

Keep the conversation attached to the work.

The right person needs the record, its context and a clear account of what happened.

Work-linked team chat	Link equipment, work orders and customer records directly in internal team conversations. Record access and conversation membership control what people can reach.
Customer participation	Share the service context through the customer relationship. Internal record links and team discussions stay within their supported access boundaries.
Reviewable history	Retain the measurement basis, review identities, issued-document version and later amendment or withdrawal lineage. Configured signatory controls support accountable release.

Audit safeguards support the laboratory quality system; accreditation and compliance remain organizational responsibilities.

THE OPERATING PICTURE

People. Productivity. Quality. Financial result.

Connected records make it possible to ask why a business is earning less than its workload suggests.

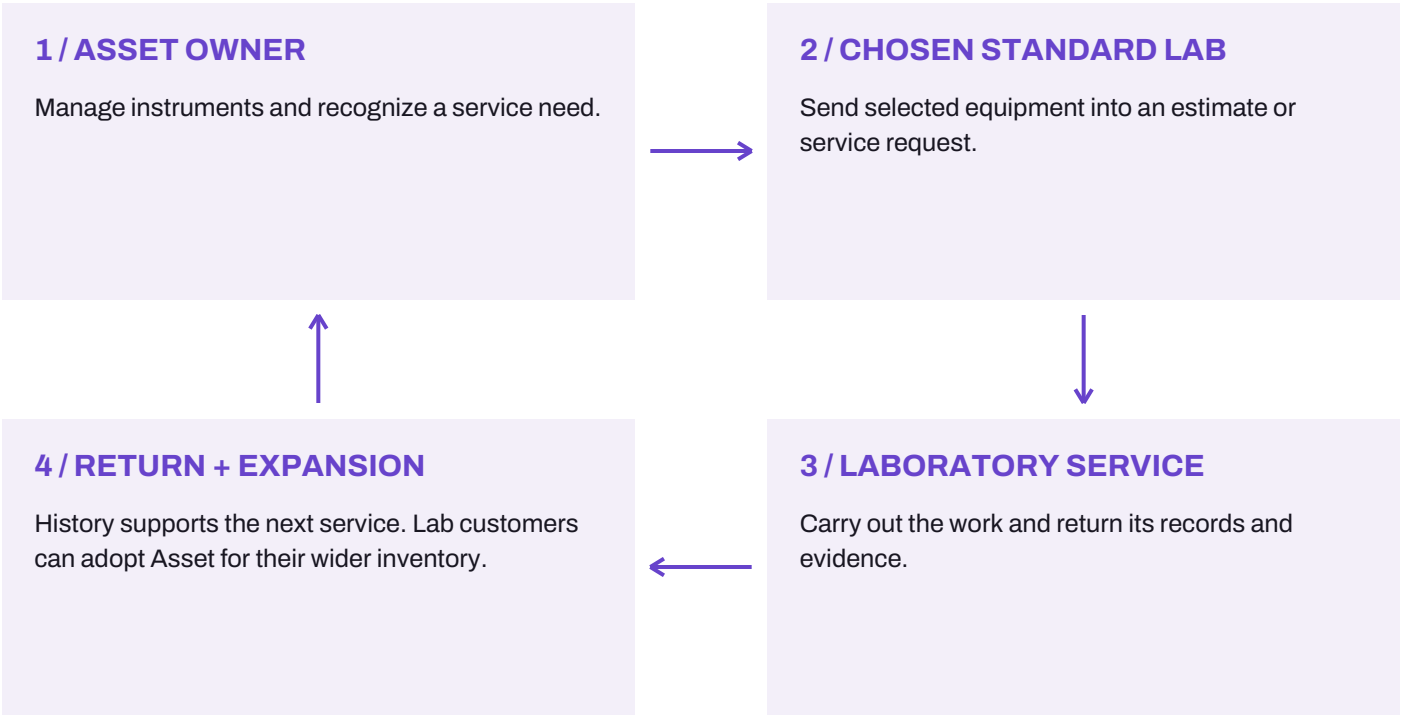

People and work	Employee profiles, role and schedule context, throughput, first-pass yield and QA returns help identify bottlenecks and rework.
Business outlook	Opportunity values, sales stages and expected-close dates support pipeline projections. Reports preserve the records behind their measures.
Financial result	Posted journal records support income statements, cost of service, expenses and net income. Receivables reporting exposes balances needing attention.

The next depth is reconciled per-job labor and overhead costing: combine reliable time, rates and allocations to reveal margin and losses at the job level.

FLYWHEEL 1 / GROWTH STRATEGY

Asset creates demand for Standard laboratories.

The product-led service loop: turn equipment ownership into connected service relationships.

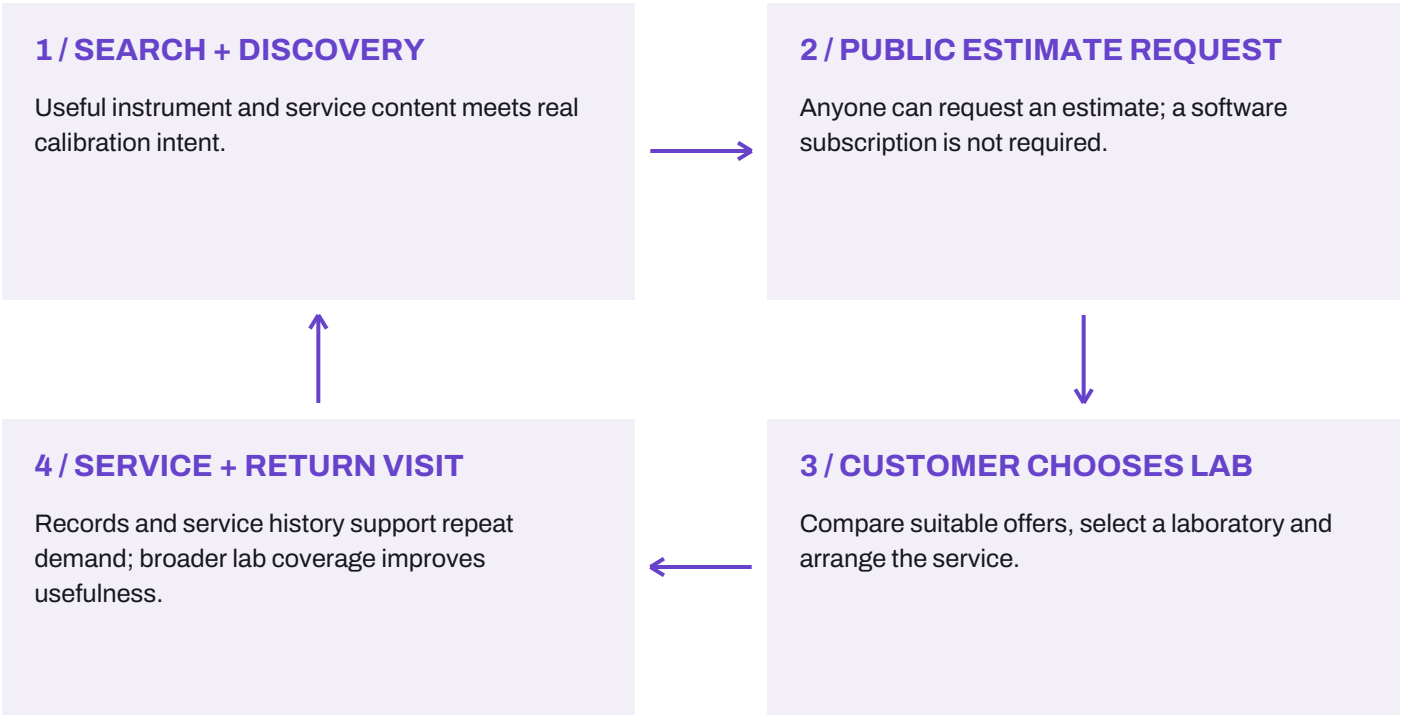

More participating owners create service demand. More useful laboratory relationships give owners another reason to keep their equipment work in Asset.

FLYWHEEL 2 / GROWTH STRATEGY

Metrologistics opens the door beyond the software.

The discovery-led service loop: reach equipment owners who have never used Asset or Standard.

Free customer participation is limited: a bounded asset list and history, with no business insight tools. Asset offers the independent operating environment; Standard serves the laboratory.

ASSET / U.S. MARKET MODEL

$2.06B annual license opportunity.

An illustrative annual license model for selected U.S. industries. The full Asset opportunity extends beyond this segment.

916,608 U.S. employer locations with 10+ employees across 19 selected industry groups.

Qualification case	Modeled buyers	Annual opportunity
10% fit	68,746	$825M
25% fit / base	171,864	$2.06B
50% fit	343,728	$4.12B

Model: location pool x qualifying fit x 0.75 buyer consolidation x $12,000 annual licenses per buyer. Fit, consolidation and spend are assumptions, not observed purchasing or adoption. Source: U.S. Census 2023 CBP. Methods in the appendix.

ASSET / INDUSTRY REACH

Different industries. Familiar operating needs.

Items and materials need identity, history, an audit trail and business context. Asset adapts the working vocabulary across industries.

Manufacturing	Aerospace and defense; automotive; industrial machinery; electronics and semiconductors; medical devices; pharmaceuticals; food and beverage; chemicals and materials.
Energy and infrastructure	Oil and gas; mining; electric utilities; renewable energy; water and wastewater; construction; electrical, mechanical and HVAC contractors.
Science and healthcare	Calibration and testing; engineering services; research and biotechnology; hospitals and clinics; universities, schools and technical training.
Service and movement	Industrial repair; field service; equipment rental; wholesale distribution; transport and warehousing; aviation, rail and marine operations; fleet operators.
Facilities and community	Telecommunications; data centers; property and facilities services; hotels; recreation and live events; agriculture and forestry; visual arts and art supplies; environmental services; government and public safety.

These are applications of the general Asset foundation. Specialized clinical, dispatch, production-control or regulated industry workflows need their own scope; a new Standard edition is developed with industry partners.

NEW STANDARD INDUSTRIES

Help set the Standard for your industry.

We are seeking companies willing to help turn real operating knowledge into exceptional industry software.

Your advantage	Founding-partner commercial terms, direct founder access and a meaningful voice in the workflows your team will use.
Your contribution	Bring experienced operators, representative records and regular feedback. Help define the difficult cases and what a successful result looks like.
Our commitment	Build on Asset, agree a bounded industry workflow, demonstrate it against your work and turn shared needs into a repeatable Standard edition.

Discuss a design partnership

COMPANY AND DELIVERY

Pre-seed. Recruiting pilot partners now.

MetraSlate is founder-led, with substantial product depth and no customers yet.

Today	AssetLight, Asset and Standard by MetraSlate: Metrology Edition are offered through Pilot / Early Access. Product views show the Standard demonstration with sample records.
Next proof	Convert scoped pilots into retained use: accepted workflows, paid licenses, repeat use, onboarding cost and customer outcomes.
Expansion	The Asset-to-lab service loop, public Metrologistics funnel and new Standard editions are the growth strategy. End-to-end exchange and free-tier limits are defined through the pilot scope.

Full automatic job costing, automated payment collection and the proposed Metrology.NET connector need further delivery and acceptance. Existing analytics screens illustrate reporting, not a deployed profit forecast.

THE OPPORTUNITY TO PARTNER

Build the next chapter with us.

We are seeking the right partner, and are open to an opportunity to invest.

Industry understanding	Help connect us with laboratory owners, equipment businesses and the people who can become strong design partners.
Commercial execution	Help turn the product into a repeatable adoption process: positioning, sales, migration and customer success.
Aligned investment	Support the team and delivery capacity needed to earn paid adoption, retained use and repeatable growth.

Founded by Cameron Buneta, a metrology professional building from the work outward.

MARKET NOTE

A broad market, with an explicit model.

The $2.06B figure models selected U.S. industries, not the full Asset TAM or current revenue.

The Census pool contains 916,608 employer locations with ten or more employees across 19 industry groups. Base assumptions: 25% qualify for the record/workflow need, 0.75 buyer accounts per qualifying location, and $12,000 annual licenses per account. This yields 171,864 modeled accounts and $2.062B annually.

Industry groups: manufacturing; construction; utilities; mining/oil/gas; transport/warehousing; wholesale; ambulatory healthcare; hospitals; education; architecture/engineering/testing; research; repair; rental; waste; facilities support; telecom; accommodation; arts/sports; recreation.

Fit, buyer consolidation and license spending require market validation. This selected-industry model excludes government, most agriculture, nonemployers, much retail and international opportunities. The calibration market overlaps and is not added.
